SUMMARY

Final-year Computer Science student with hands-on experience across the MERN stack and Core Java, building full-stack applications with real-time features (Socket.io, WebXR) and secure authentication (JWT, bcrypt). Currently working as a Software Development Intern at AIValytics, developing backend services for the company's Job Portal and designing the frontend and database schema for a Courses Dashboard using FastAPI, Supabase (PostgreSQL) and React. Strong foundation in DSA and CS fundamentals through consistent problem-solving practice. Seeking Software Development / Web Development roles where I can contribute from day one and grow fast.

EDUCATION

Parul University, Vadodara, Gujarat — B.Tech, Computer Science Engineering Aug 2023 – 2027 (Expected)

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP

Mother Teresa Vidyapeeth, Muzaffarpur, Bihar — Higher Secondary (Class XII), CBSE 2020 – 2022

DAV Public School, Ranchi, Jharkhand — Secondary School (Class X), CBSE 2018 – 2020

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap 5, A-Frame (WebXR)

Backend: Node.js, Express.js, Socket.io, REST APIs, FastAPI (Python)

Databases: MySQL, MongoDB Atlas (Mongoose ODM), Supabase (PostgreSQL)

CS Fundamentals: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP

Tools & Cloud: Git/GitHub, Docker, AWS (Cloud Foundations), Render, Vercel, Railway, Linux/Bash, Postman

EXPERIENCE

Software Development Intern — AIValytics Aug 2026 – Present

FastAPI • Supabase (PostgreSQL) • React • Render • Vercel

- Developing backend services for the company's **Job Portal** using FastAPI, building RESTful APIs for job listings and candidate applications, with Supabase (PostgreSQL) integration for data persistence and validation.
- Designed the relational **database schema for the Courses Dashboard**, modelling courses, modules and student enrollments with normalized tables and foreign-key relationships for consistent, scalable data access.
- Designed and implemented the **Courses Dashboard frontend** in React, delivering responsive, reusable UI components integrated with backend APIs.
- Contributed to **Campus Connect**, an AI-powered assessment platform for colleges; structured and validated a 200-question MCQ bank across 5 hiring companies (Wipro, ABB, Mercedes-Benz, Tech Mahindra, Nuclei), mapped to a Subject → Topic → Subtopic taxonomy through a many-to-many schema.
- Authored the team's deployment strategy (GitHub → Render backend → Vercel frontend → CORS configuration → end-to-end testing) and identified exposed secret keys in environment configuration, recommending key rotation prior to production release.

Forage Job Simulation – Daikibo Industrial 2026

Virtual Job Simulation | Data Analysis & Visualization

- Built interactive Tableau dashboards to analyze factory telemetry data, applying filters and visual breakdowns to surface equipment performance trends.
- Designed an Excel-based classification system using nested IF formulas to automate machine status categorization from sensor data.

PROJECTS

Bite Rush – Full-Stack Food Ordering Platform Jan 2026

Node.js | Express.js | MongoDB Atlas | JWT + bcrypt | Bootstrap 5 | Render

- Built a full-stack food ordering platform with category-filtered menu browsing (Starters, Mains, Beverages, Desserts), real-time cart with quantity controls persisted via localStorage, and one-click checkout with server-side price validation.

- Developed a restaurant admin dashboard with live incoming-orders table (auto-refresh every 30s), inline 4-stage status pipeline (Received → Preparing → Ready → Delivered), and full menu CRUD via modal forms.
- Implemented JWT + bcrypt authentication with role-based access control — separate protected routes for Customer and Admin roles.
- Designed a clean 3-tier REST API with 12+ endpoints covering auth, categories, menu, and orders; deployed frontend as Render Static Site and backend as Render Web Service.
- Modelled relational data in MongoDB: User → Orders → OrderItems → MenuItems → Categories, capturing price at purchase time to prevent tampering.

AR Classroom Seating & Attendance System

Mar 2026

Node.js | Express | Socket.io | A-Frame (WebXR) | bcrypt | JavaScript | Render

- Built a WebXR-based attendance system with real-time 3D seat visualization using A-Frame, eliminating manual roll calls in classrooms.
- Engineered live seat-map sync via Socket.io — seat claims broadcast instantly to all connected faculty and student devices simultaneously.
- Implemented QR code room anchoring for student check-in with role-based authentication (Faculty/Student) using bcrypt + express-session.
- Built REST API with 10+ endpoints covering rooms, seats, attendance records, QR generation and CSV export.
- Deployed on Render with persistent JSON database and session-based auth protection on all routes.
